ABOUT BREEDER FEED

Breeder premix products include egg breeders and broiler breeders, which are divided into different proportions of 0.5%, 2.5%, and 4%, which can meet the needs of feed mills and farms of different production levels. Users only need to select qualified raw materials and prepare them according to the recommended formula provided.

The products are rich in nutritional additives such as vitamins, trace elements, amino acids, antioxidants, antifungal agents, and preventive health care drugs. A large proportion of the products contain stone powder, calcium hydrogen phosphate, salt, and high-quality fish meal. The balance of various nutrients can ensure the effective absorption of breeders.

Production practice application shows that the use of this product can give full play to the production potential of breeders, improve egg production rate and egg production, prolong egg production peak period, increase egg weight, improve egg shell quality and feed conversion efficiency, reduce feed costs, and increase economic benefits.

Breeder premix products can effectively prevent various nutritional deficiencies, enhance the body's disease resistance, and have obvious effects on improving the hatching rate of eggs after fertilization.
